PROFESSIONAL SUMMARY

Frontend Engineer with **5+ years of experience** building scalable, high-performance web applications using **React.js**, **Next.js**, and **TypeScript**. Skilled in **frontend architecture**, **server-side rendering (SSR)**, browser automation, Chrome extensions, and **performance optimization**. Experienced in developing enterprise-grade platforms, workflow-driven UIs, and cloud-based automation systems with strong focus on scalability, maintainability, and user experience.

TECHNICAL SKILLS

- **Languages: JavaScript (ES6+)**, **TypeScript**, **HTML5**, **CSS3**
- **Frontend: React.js**, **Next.js**, **Redux**, Responsive Design, Component Architecture
- **Styling: Tailwind CSS**, SCSS/SASS, Styled Components, Bootstrap
- **Testing: Jest**, **React Testing Library**, **Playwright**
- **Backend & APIs: Node.js**, MongoDB, Supabase, **REST APIs**
- **Tools & Platforms: Git**, GitHub, Bitbucket, Webpack, Vite, Babel, AWS Amplify, **CI/CD**
- **AI Tools:** ChatGPT, Claude, Cursor, Antigravity

WORK EXPERIENCE

Frontend Engineer – Quokka Labs | Noida — March 2025 – Present

- Architected and developed **Evertest**, a full-stack test automation platform enabling users to record, manage, and execute end-to-end browser test cases with real-time reporting and analytics.
- Built **Chrome** and Firefox extension-based recorders using DOM APIs, browser debugging protocols, and event listeners to capture replayable user interaction workflows.
- Developed workflow-driven UI using **React.js**, **TypeScript**, and **Tailwind CSS**, reducing test configuration time and improving debugging efficiency through step-level failure insights.
- Designed scalable **Playwright**-based execution pipelines supporting parallel execution, cross-browser automation, and headless cloud execution.
- Implemented cloud-based scheduling and **CI/CD** integrations with **GitHub**, GitLab, and Azure pipelines for automated execution during deployment stages.
- Integrated **Supabase** authentication, real-time database synchronization, and storage services while designing optimized schemas for execution logs and test management.
- Enhanced regression testing accuracy using AI-based DOM, visual, and text comparison techniques to identify UI and content changes.

Frontend Developer – Rad Techno Services | Jaipur — May 2021 – March 2025

- Architected and developed SEO-optimized e-commerce applications using **React.js**, **Next.js**, and **SSR**, increasing user engagement by 15% and conversion rates by 10%.
- Improved application performance by implementing **code splitting**, lazy loading, and dynamic imports, reducing page load times by **40%**.
- Refactored legacy codebases into reusable component systems and modular **React hooks**, reducing code duplication by 25% and improving maintainability.
- Developed real-time communication features using **WebRTC**, enabling scalable video calling experiences for end users.

- Collaborated with backend teams to integrate **REST APIs**, optimize frontend state management, and improve cross-browser compatibility.

PERSONAL PROJECTS

Drawing Board

The Drawing Board project allows users to create and manipulate drawings using vanilla JavaScript. Users can draw various shapes, erase mistakes, and paint with different colors. The application also provides the option to download their artwork as an image file, enhancing the overall creative experience.

Object Detector

The Object Detector project, developed with Next.js and the TensorFlow API, enables real-time detection of various objects within video feeds. The system is specifically designed to identify human figures and trigger an alarm when a human is detected.

Online Code Editor

The Online Code Editor project, built with Vite and ReactJS, enables users to write and execute code in various programming languages. Leveraging the react-monaco-editor package, it provides a rich code editing experience with syntax highlighting and IntelliSense features. Users can quickly test and run their code snippets in a seamless environment.

EDUCATION

Bachelor of Technology in Computer Science & Engineering

SKIT, Jaipur | Aug 2017 – Jun 2021
